Assignment Statements

Assignment Statements

The expression (right) is evaluated, and its value is assigned to the name (left).

```
>>> x = 2
>>> y = x + 1
>>> y
3
>>> x = 5
>>> x
5
>>> y
3
```

(Demo)

Environment Diagrams

Calling User-Defined Functions

Procedure for calling/applying user-defined functions (version 1):

1. Add a local frame, forming a new environment
2. Bind the function's formal parameters to its arguments in that frame
3. Execute the body of the function in that new environment

```
1 from operator import mul
2 def square(x):
3     return mul(x, x)
4 square(-2)
```

Calling User-Defined Functions

Procedure for calling/applying user-defined functions (version 1):

1. Add a local frame, forming a new environment
2. Bind the function's formal parameters to its arguments in that frame
3. Execute the body of the function in that new environment

```
1 from operator import mul
2 def square(x):
3     return mul(x, x)
4 square(-2)
```

A function's signature has all the information needed to create a local frame

Frames & Environments

Frame: Holds name-value bindings; looks like a box; no repeated names allowed!

Global frame: The frame with built-in names (min, pow, etc.)

Environment: A sequence of frames that always ends with the global frame

Lookup: Find the value for a name by looking in each frame of an environment

A name (which is a type of expression) such as `x` is evaluated by looking it up

Why organize information this way?

- Local context before global context
- Calling or returning changes the local context
- Assignment within a function's local frame doesn't affect other frames

```
1 from operator import mul
2 def square(x):
3     return mul(x, x)
4 square(-2)
```

A Sequence of Frames

An environment is a sequence of frames.

A sequence is a first frame and then the rest of the sequence

A name evaluates to the value bound to that name in the earliest frame of the current environment in which that name is found.

The global frame is always the last place you look

Even though all three frames are in the same **diagram**, they might not be in the same **environment**

(Demo)

Multiple Assignment

Multiple Assignment

Execution rule for assignment statements:

1. Evaluate all expressions to the right of = from left to right.
2. Bind all names to the left of = to those resulting values in the current frame.

Small Expressions

Problem Definition

From Discussion 0:

Imagine you can call only the following three functions:

- $f(x)$: decrement an integer x to get $x-1$
- $g(x)$: increment then double an integer x to get $2*(x+1)$
- $h(x, y)$: Concatenates the digits of two different positive integers x and y . For example, $h(789, 12)$ evaluates to 78912 and $h(12, 789)$ evaluates to 12789.

Definition: A *small expression* is a call expression that contains only f , g , h , the number 5, and parentheses. All of these can be repeated. For example, $h(g(5), f(f(5)))$ is a small expression that evaluates to 103.

What's the **shortest** *small expression* you can find that evaluates to 2024?

Fewest calls?
Shortest length when written?

How do you get to **2025**?

5 → 4 → 10 → 9 → 20
5 → 4 → 3 → 2
5

$h(g(f(g(f(5))))), h(f(f(f(5))), 5))$

Effective problem solving:

- Understand the problem
- Come up with ideas
- Turn those ideas into solutions

Search

A common strategy: try a bunch of options to see which is best

Computer programs can evaluate many alternatives by repeating simple operations

A Computational Approach

Try all the small expressions with 3 function calls, then 4 calls, then 5 calls, etc.

$f(f(f(5))) \rightarrow 2$	$f(f(h(5,5))) \rightarrow 53$	$h(5,f(f(5))) \rightarrow 53$	$h(g(5),f(5)) \rightarrow 124$
$g(f(f(5))) \rightarrow 8$	$g(f(h(5,5))) \rightarrow 110$	$h(5,g(f(5))) \rightarrow 510$	$h(g(5),g(5)) \rightarrow 1212$
$f(g(f(5))) \rightarrow 9$	$f(g(h(5,5))) \rightarrow 111$	$h(5,f(g(5))) \rightarrow 511$	$h(g(5),h(5,5)) \rightarrow 1255$
$g(g(f(5))) \rightarrow 22$	$g(g(h(5,5))) \rightarrow 226$	$h(5,g(g(5))) \rightarrow 526$	$h(h(5,5),f(5)) \rightarrow 554$
$f(f(g(5))) \rightarrow 10$	$f(h(5,f(5))) \rightarrow 53$	$h(5,f(h(5,5))) \rightarrow 554$	$h(h(5,5),g(5)) \rightarrow 5512$
$g(f(g(5))) \rightarrow 24$	$g(h(5,f(5))) \rightarrow 110$	$h(5,g(h(5,5))) \rightarrow 5112$	$h(h(5,5),h(5,5)) \rightarrow 5555$
$f(g(g(5))) \rightarrow 25$	$f(h(5,g(5))) \rightarrow 511$	$h(5,h(5,f(5))) \rightarrow 554$	$h(f(f(5)),5) \rightarrow 35$
$g(g(g(5))) \rightarrow 54$	$g(h(5,g(5))) \rightarrow 1026$	$h(5,h(5,g(5))) \rightarrow 5512$	$h(g(f(5)),5) \rightarrow 105$
	$f(h(5,h(5,5))) \rightarrow 554$	$h(5,h(5,h(5,5))) \rightarrow 5555$	$h(f(g(5)),5) \rightarrow 115$
	$g(h(5,h(5,5))) \rightarrow 1112$	$h(5,h(f(5),5)) \rightarrow 545$	$h(g(g(5)),5) \rightarrow 265$
	$f(h(f(5),5)) \rightarrow 44$	$h(5,h(g(5),5)) \rightarrow 5125$	$h(f(h(5,5)),5) \rightarrow 545$
	$g(h(f(5),5)) \rightarrow 92$	$h(5,h(h(5,5),5)) \rightarrow 5555$	$h(g(h(5,5)),5) \rightarrow 1125$
	$f(h(g(5),5)) \rightarrow 124$	$h(f(5),f(5)) \rightarrow 44$	$h(h(5,f(5)),5) \rightarrow 545$
	$g(h(g(5),5)) \rightarrow 252$	$h(f(5),g(5)) \rightarrow 412$	$h(h(5,g(5)),5) \rightarrow 5125$
	$f(h(h(5,5),5)) \rightarrow 554$	$h(f(5),h(5,5)) \rightarrow 455$	$h(h(5,h(5,5)),5) \rightarrow 5555$
	$g(h(h(5,5),5)) \rightarrow 1112$		$h(h(f(5),5),5) \rightarrow 455$
			$h(h(g(5),5),5) \rightarrow 1255$
			$h(h(h(5,5),5),5) \rightarrow 5555$

Reminder: $f(x)$ decrements; $g(x)$ increments then doubles; $h(x, y)$ concatenates

A Computational Approach

Try all the small expressions with 3 function calls, then 4 calls, then 5 calls, etc.

$f(g(h(g(f(5))),g(5)))) \rightarrow 2025$ has 6 calls

5 → 4 → 10

5 → 12

$f(g(h(f(f(g(5))),g(5)))) \rightarrow 2025$ has 7 calls

5 → 12 → 11 → 10

5 → 12

$f(g(g(f(g(g(h(g(5),5))))))) \rightarrow 2025$ has 8 calls

$f(g(g(h(g(g(f(g(5))))),5))) \rightarrow 2025$ has 8 calls

$f(h(g(f(g(f(5))))),g(g(5))) \rightarrow 2025$ has 8 calls

$h(g(f(g(f(5))))),f(g(g(5))) \rightarrow 2025$ has 8 calls

$h(g(g(f(g(g(f(g(5))))))),5) \rightarrow 2025$ has 8 calls

$h(g(g(h(f(5),f(g(f(5)))))),5) \rightarrow 2025$ has 8 calls

$h(g(f(g(f(5))))),h(f(f(f(5))),5)) \rightarrow 2025$ has 9 calls

125 → 252 → 506 → 505 → 1012 → 2026 → 2025

2025

5 → 4 → 10 → 9 → 20

5 → 4 → 3 → 2

5

Reminder: $f(x)$ decrements; $g(x)$ increments then doubles; $h(x, y)$ concatenates

A Computational Approach

Try all the small expressions with 3 function calls, then 4 calls, then 5 calls, etc.
